

BackHome/TSM in a G06.24 Environment:

### **BackHome/TSM V5.XX enhancements**

There are no more enhancements under development for BackHome/TSM V5.XX (including V5.20).

Only Support/Maintenance fixes will be provided to these versions.

To benefit from enhancements in BackHome/TSM, an upgrade to the current BackHome/TSM V6.0 should be scheduled.

BackHome/TSM V6.0 Release 2 is available now for our entire customer-base.

### **OSS Support**

BackHome/TSM V6.0 already supports OSS backup via the BackHome OSS Option.

BackHome/TSM support for OSS under Backup/Restore 2.0 is not planned, because the functionality of our current BackHome/TSM OSS Option exceeds the functionality available for OSS through Backup/Restore 2.0.

### **SQL-MX Support**

Backup/Restore of SQL/MX is only available through Backup/Restore 2.0. Support for SDL/MX backup into Tivoli Storage Manager via BackHome/TSM will be provided in a future BackHome version. Backup/Restore of SQL/MX to Tivoli Storage Manager is available now from ETI-NET using BackBox®.

### **TMF “large audit trail” with BackHome/TSM**

Fully supported now. To use large audit trails file (larger than 2G), update the TMF option configuration to match the larger file size intended to be used.

(Configuration of the keywords OBJECTSIZE, AD-OBJECTSIZE and OD-OBJECTSIZE)

### **Other Issues**

There are no known issues about using BackHome/TSM V6.0 or V5.20 in a G06.24 environment. ETI-NET compatibility tests with G06.24 are on-going.

No problems are expected based on our review of the new features of G06.24.

Any compatibility issues identified will be communicated to our customers with the appropriate work around or fix.
